INTRODUCTION

Building a house in Sri Lanka is a complex and stressful process.

In Sri Lanka, building a house is one of the biggest dreams in a person's life, but at the same time, it is one of the most difficult and stressful processes that people face. Many people already have land, but they do not know how to start building their dream home. They are confused about where to go first, whether they should meet an architect, engineer, contractor, or a lawyer. Even if they start the process, they do not have a clear idea about the total cost, the quality of materials, the labor charges, or the time required to complete the construction. Because of this lack of knowledge and guidance, many people end up spending more money than expected, choosing the wrong workers, or facing delays and legal issues. There is also no single platform in Sri Lanka that connects all these services together in one place. People have to go to many different places to get information, compare prices, and find professionals. This creates a big gap in the construction industry. Therefore, there is a strong need for a smart, simple, and centralized system that can guide people from the beginning of their construction journey until the final completion of their home. BuildMe.lk is designed to solve this problem by creating a complete digital solution where users can plan, manage, and build their dream home easily using their mobile phone or computer.

Most people have land but they don't know:

- Not knowing the total cost
- Not understanding materials and quality
- Not finding trusted workers
- Not knowing legal procedures
- Difficulty in managing time and construction process
- Lack of transparency in pricing

PROJECT IDEA

BuildMe.lk is a smart digital platform (website + mobile app) that connects everything needed to build a house into one system

The idea of BuildMe.lk starts from a very simple real-life situation: a person has land and a dream to build a house, but they do not know how to begin. Instead of going to different people and wasting time and money, they open the BuildMe.lk website or mobile app. They log in easily using their Telegram or email account, and then they upload a simple sketch of their dream house or enter basic details such as the number of rooms, floors, and size. The system then automatically generates a rough estimation, including total cost, required materials like cement, sand, steel, and wires, and even the estimated time to complete the project. After that, the user can publish their project, and instantly, all registered professionals such as contractors, architects, plumbers, electricians, and engineers receive a notification that a new project is available. These professionals can then start bidding on the project by offering their price and services, just like a tender system. One contractor may offer 10 million rupees, another may offer 9.5 million, and another may offer 9.2 million, creating a competitive environment where the customer can choose the best option based on price, quality, and ratings. At the same time, the platform also provides additional services such as legal advice, worker hiring, material purchasing, and transportation booking. Even if a construction site suddenly needs workers in the morning, they can post a job, and available workers can accept it instantly. This system acts like a “Google for construction in Sri Lanka,” where everything related to building a house is available in one place. The goal is to make the entire construction process simple, fast, transparent, and affordable for everyone.

👉 It is a Construction Hub for Sri Lanka

Users can:

- Plan their dream house
- Get cost estimation
- Get material details
- Find professionals
- Receive competitive bids
- Hire workers
- Arrange transport
- Handle everything from mobile

MAIN OBJECTIVES

The main objective of BuildMe.lk is to create a complete digital ecosystem that solves all problems related to building a house in Sri Lanka. One of the key goals is to make construction simple for ordinary people who do not have technical knowledge. Many users do not understand engineering terms, material quality, or cost calculations, so the platform will provide clear and easy explanations for everything. Another important objective is to create transparency in pricing by showing real-time material costs, labor charges, and total budget estimates. This will help users avoid being overcharged. The platform also aims to introduce a competitive bidding system where professionals compete to provide the best service at the best price, helping customers save money. Additionally, BuildMe.lk aims to connect all construction-related services into one platform, including architects, lawyers, engineers, workers, suppliers, and transport providers. By doing this, the platform reduces the need to visit multiple places and makes the entire process faster and more efficient. Finally, the project aims to support the Sri Lankan economy by creating job opportunities for workers and helping small businesses grow.

1. Solve Common Problems

Help people understand:

- Budget
- Materials
- Labor
- Legal process

2. Create Transparency

Show:

- Real prices
- Material quality
- Labor charges

3. Introduce Bidding System

Allow professionals to compete → lower cost for users

MAIN OBJECTIVES

4. Build a Full Ecosystem

Connect:

- Customers
- Contractors
- Workers
- Suppliers

5. Save Time & Money

Make construction:

- ✓ Faster
- ✓ Easier
- ✓ More affordable

COMPLETE SYSTEM COMPONENTS

- Smart Estimation System
- Open Bidding System (MAIN FEATURE)
- Ticket Access System
- Worker Marketplace
- Legal & Professional Services
- Material Marketplace
- Transport System
- Payment System
- Communication System

DETAILED FEATURES

SMART HOUSE ESTIMATION SYSTEM

User Inputs

- Land size
- Floors (1 / 2 / 3)
- Rooms
- Bathrooms
- Kitchen
- Special features

User can also

- Upload sketch
- Draw simple plan

System Outputs:

Budget Estimation

- Total cost (example: LKR 8M – 12M)

Material Calculation

- Cement (Tokyo, Ultratech, Holcim)
- Sand
- Metal
- Bricks
- Steel rods (10mm, 12mm, 16mm, 20mm)

Electrical System

- Wire sizes
- Wire types
- Quantity

Plumbing System

- Pipes
- Fittings
- Water system estimation

Time Estimation

- Example: 6–10 months

 This gives users a clear understanding before starting

OPEN BIDDING SYSTEM

Process:

Step 1: User Login

User logs in using:

- Telegram
- Email

Step 2: Upload Project

User:

- Uploads sketch
- Gets estimation

Step 3: Publish Project

Project is visible to all professionals

Step 4: Notification System

Contractors receive:

👉 “New project available – Start bidding”

Step 5: Bidding Starts

Example:

- Contractor A → LKR 10,000,000
- Contractor B → LKR 9,500,000
- Contractor C → LKR 9,200,000

Important:

Contractors compete by:

- Lower price
- Better quality
- Faster completion

Step 6: Comparison

User sees:

- Price
- Ratings ★
- Experience
- Previous work

Step 7: Selection

User chooses best contractor

The bidding system is the core feature and biggest innovation of BuildMe.lk. This system works like an open tender process where multiple professionals compete for a project. After a user publishes their project, all registered contractors and service providers receive a notification. They can then submit their bids by offering a price and explaining their services. This creates a competitive environment where professionals try to offer better prices and better quality to win the project. The user can view all bids in a clear format and compare them based on price, ratings, experience, and past work. Instead of choosing only the lowest price, the user can select the best overall option. This system helps reduce construction costs and improves service quality because professionals must compete to win projects. It also increases transparency and trust between customers and service providers.

TICKET SYSTEM

To prevent users from bypassing the platform and contacting professionals directly, BuildMe.lk uses a ticket-based system. Before accessing full details or contacting contractors, users must purchase a ticket. This ticket acts as a secure access key that allows users to view bids, communicate with professionals, and proceed with the project. This system ensures that all transactions happen within the platform, which helps maintain fairness and also generates revenue for the company.

Problem:

Users may bypass platform and contact contractors directly

Solution:

Users must buy a ticket before:

- Viewing bids
- Contacting professionals
- Unlocking project details

Benefits:

- ✓ Secure system
- ✓ Revenue generation
- ✓ Fair usage

TICKET SYSTEM

To prevent users from bypassing the platform and contacting professionals directly, BuildMe.lk uses a ticket-based system. Before accessing full details or contacting contractors, users must purchase a ticket. This ticket acts as a secure access key that allows users to view bids, communicate with professionals, and proceed with the project. This system ensures that all transactions happen within the platform, which helps maintain fairness and also generates revenue for the company.

Problem:

Users may bypass platform and contact contractors directly

Solution:

Users must buy a ticket before:

- Viewing bids
- Contacting professionals
- Unlocking project details

Benefits:

- ✓ Secure system
- ✓ Revenue generation
- ✓ Fair usage

WORKER MARKETPLACE

The worker marketplace is designed to solve daily labor problems in construction sites. Sometimes, site managers urgently need workers such as painters, plumbers, or electricians. Through BuildMe.lk, they can post their requirements in the morning, and available workers can accept the job instantly using the mobile app. This system helps workers find jobs easily and ensures that construction projects do not get delayed due to lack of labor.

Daily Job System:

Site managers post:

- “Need 2 painters today”
- “Need plumber”
- “Need 3 workers”

Workers can:

- Find jobs
- Accept instantly
- Work daily

☞ Solves:

- Worker shortage
- Daily employment

TRANSPORT & MATERIAL HUB

BuildMe.lk also includes a transport and material system where users can order materials and arrange transportation easily. Many people in Sri Lanka face difficulties when transporting materials like sand, cement, or bricks, especially in rural or mountain areas. The platform allows vehicle owners (tuk-tuks, Boleros, lorries, trucks) to register and provide transport services. Users can book these vehicles directly through the app. At the same time, hardware suppliers can list their products, allowing users to compare prices and order materials from one place.

Vehicles:

- Tuk-tuk
- Bolero
- Lorry
- Truck

Drivers:

- Register on platform
- Accept delivery jobs

👉 Special Advantage:

Helps remote & mountain areas

LEGAL & PROFESSIONAL SERVICES

The platform connects users with professionals such as lawyers, architects, and quantity surveyors. Lawyers help with legal approvals and agreements, architects help design the house, and quantity surveyors verify cost estimates. This ensures that the construction process is safe, legal, and well-planned.

Available Experts:

Lawyers:

- Land approval
- Legal agreements

Architects:

- Design houses
- Create plans

Quantity Surveyors (QS):

- Verify costs
- Estimate budgets

👉 Ensures:

- ✓ Safe construction
- ✓ Legal protection

BUSINESS MODEL

BuildMe.lk will generate revenue through multiple methods. Professionals such as contractors, lawyers, and workers must pay a registration fee and an annual subscription fee to use the platform. Customers must purchase tickets to access services like bidding and communication. The platform will also take a small commission from successful deals. In addition, hardware suppliers can pay for advertisements to promote their products. This combination of revenue streams ensures that the business is sustainable and profitable.

1. Registration Fees

- Contractors
- Lawyers
- Workers

2. Annual Subscription

All professionals pay yearly fee

3. Ticket System

Customers pay to access services

4. Commission

% from successful deals

5. Advertisements

Hardware suppliers promote products

SYSTEM WORKFLOW

Step 1:

User logs in

Step 2:

User enters details / uploads sketch

Step 3:

System generates estimation

Step 4:

User publishes project

Step 5:

Professionals bid

Step 6:

User selects contractor

Step 7:

Construction starts

Step 8:

User tracks progress

SYSTEM WORKFLOW:

END-TO-END CONSTRUCTION MANAGEMENT

USER-CENTRIC PROCESS & DATA FLOW

1 USER LOGS IN

2 USER ENTERS DETAILS / UPLOADS SKETCH

3 SYSTEM GENERATES ESTIMATION

4 USER PUBLISHES PROJECT

Make the project live online, to project live or onces

5 PROFESSIONALS BID

Submit prodressions competing proposals

6 USER SELECTS CONTRACTOR

7 CONSTRUCTION STARTS

Review the bids and chooses the winning contractor site

8 USER TRACKS PROGRESS

CEO Vision & Development Instructions

Team, our goal is not to create only a website or mobile application. Our goal is to create the largest construction ecosystem and smart construction hub in Sri Lanka. We want to build a platform where anyone can handle their dream home from their mobile phone or computer without confusion. This platform must connect customers, contractors, architects, lawyers, workers, hardware shops, transport providers, and suppliers into one digital system.

Our biggest innovation is the open bidding system, where multiple professionals can compete and offer their best prices and services to customers. This will create transparency, lower prices, and better quality for Sri Lankan people.

Main Vision of BuildMe.lk

We want BuildMe.lk to become:

- The “Google of Construction” in Sri Lanka
- A complete construction hub
- A trusted platform for home building
- A smart bidding and estimation platform
- A daily worker marketplace
- A material and transport marketplace

Instructions for Backend Developers

Backend developers must focus on making the platform:

- Smart
- Fast
- Secure
- Scalable
- AI-supported

Smart Estimation Engine

This is one of the most important systems.

The backend team must create a system where:

- User uploads a sketch or enters house details
- System calculates:
 1. Material quantities
 2. Labor charges
 3. Electrical systems
 4. Plumbing systems
 5. Construction timeline

The system should calculate:

- Cement bags
- Sand quantity
- Metal quantity
- Wire sizes
- Pipe systems
- Steel rod sizes

Dynamic Material Price System

In Sri Lanka, material prices change daily.

Example:

- Cement prices go up/down
- Steel prices change
- Wood prices change
- Transport charges change

So we cannot manually update everything every day

.

💡 CEO Suggestion for Backend Team

We should use:

- AI systems
- Smart APIs
- Data scraping systems
- LLM models like:
 - Llama
 - Open-source AI models

Goal:

The AI should:

- Collect material prices from trusted websites
- Analyze market prices
- Give average trusted prices
- Update our database automatically

Example:

User asks:

“What is the current wood price in Kandy?”

AI system should:

- Search trusted sources
- Compare prices
- Give updated answer

AI Chatbot System

We should create a smart assistant for users.

The chatbot should answer:

- House budget questions
- Material questions
- Construction time questions
- Legal questions
- Worker availability questions

Example Questions:

- “How much for a 2-story house?”
- “What is best cement?”
- “How many months to build?”

The chatbot must answer in:

- Simple English
- Sinhala
- Tamil (future)

Smart Filtering System

This is VERY IMPORTANT.

Not all projects need all workers.

Example:

- Some users only need plumbers
- Some users only need electricians
- Some users only need painters

Backend Team Must Create:

A filtering and routing system.

Example:

If user selects:

✓ “Need only electrician”

Then:

- Notification only goes to electricians
- Not to contractors or plumbers

This System Must:

- Save time
- Reduce spam
- Improve user experience

Daily Worker Marketplace System

Backend must create a simple worker system.

Because many workers in Sri Lanka:

- Are not highly educated
- Need simple interfaces

Site Managers Should:

Add workers quickly using:

- One button
- Simple form

Example:

“Need 2 painters today”

Workers nearby receive notification.

Location-Based System

Backend must create a simple worker system.

Because many workers in Sri Lanka:

- Are not highly educated
- Need simple interfaces

Site Managers Should:

Add workers quickly using:

- One button
- Simple form

Example:

“Need 2 painters today”

Workers nearby receive notification.

Hardware & Supplier System

We want all hardware shops in Sri Lanka inside BuildMe.lk.

Hardware Shops Should:

- Register accounts
- Upload materials
- Give offers
- Join bidding

Example:

One hardware says:

“I can provide all cement cheaper.”

Another says:

“I give transport free.”

This creates healthy competition.

Instructions for Frontend Developers & UI Designers

Frontend and UI team must make the system:

- Modern
- Clean
- Very simple
- Mobile-friendly
- Easy for Sri Lankan users

◆ 1. Simple UI/UX

Many users:

- Are not technical
- Are older people
- Need simple navigation

So UI Must Have:

- Large buttons
- Simple forms
- Sinhala-friendly structure
- Minimal confusion

◆ 2. Beautiful Login System

CEO Vision:

We need:

- Creative login page
- Modern animations
- Telegram login
- Google login

3. Mobile First Design

Most Sri Lankan users use:

- Android phones

So mobile app experience is VERY important.

◆ 4. Smart Dashboard

User dashboard should show:

- Estimation
- Bids
- Messages
- Worker updates
- Material updates

Everything in one place.

◆ 5. Worker-Friendly Interface

Worker pages should be:

- Extremely simple
- One-click job accepting

◆ 6. Real-Time Notifications

Need:

- Popups
- Alerts
- Live updates

Example:

“New project available”

7. Material Marketplace UI

Need:

- Product cards
- Price comparisons
- Offer highlights

◆ 8. Construction Progress UI

Customers should track:

- Construction status
- Budget usage
- Timeline

🔒 Security Instructions

Backend team must focus on:

- Secure login
- OTP verification
- Anti-fraud systems
- Data privacy

💰 Business System Instructions

The platform earns through:

- Registration fees
- Annual subscriptions
- Ticket system
- Ads
- Commission

Backend must track all payments correctly.

Final CEO Vision

Team, BuildMe.lk is not just another website.

We are building:

- A construction ecosystem
- A digital construction economy
- A national platform for Sri Lanka

Our platform should help people:

- Save money
- Save time
- Build better homes
- Find trusted workers
- Manage everything from mobile phones

If we build this correctly, BuildMe.lk can become The largest construction technology platform in Sri Lanka.

BuildMe.lk vs ChatGPT

Why People Should Choose BuildMe.lk Instead of Only Using AI Tools

Many people may ask:

“Why should we use BuildMe.lk if we can already ask ChatGPT or AI tools about house plans and construction ideas?”

This is a very important question, and the answer is simple:

👉 ChatGPT gives information.

👉 BuildMe.lk gives a complete real-world construction solution.

🧠 What ChatGPT Can Do

AI tools like ChatGPT can:

- Give rough ideas
- Suggest house plans
- Explain materials
- Give basic cost estimation
- Answer construction questions

Example:

A user uploads a simple sketch and asks:
“How much for this house?”

Limitations of ChatGPT for Real Construction

ChatGPT cannot directly:

- Connect users with real contractors
- Give real-time Sri Lankan market prices
- Send bids from construction companies
- Provide verified workers
- Arrange transportation
- Manage construction progress
- Handle legal approvals
- Provide real hardware shop offers
- Give island-wide worker hiring
- Track projects
- Provide trusted company ratings

ChatGPT is not a full construction ecosystem.

What BuildMe.lk Does Differently

BuildMe.lk is not only an AI system.

It is:

- ✓ A construction marketplace
- ✓ A bidding platform
- ✓ A material hub
- ✓ A worker marketplace
- ✓ A transport system
- ✓ A legal & professional service platform

Why BuildMe.lk Is More Powerful

BuildMe.lk connects users with:

- Real architects
- Real contractors
- Real electricians
- Real plumbers
- Real welders
- Real lawyers
- Real quantity surveyors (QS)

ChatGPT cannot provide real human construction teams directly.

Why People Should Choose BuildMe.lk

People should choose BuildMe.lk because:

- ✓ Real services
- ✓ Real professionals
- ✓ Real-time bidding
- ✓ Real market prices
- ✓ Full project management
- ✓ Trusted workers
- ✓ Material marketplace
- ✓ Transportation support
- ✓ Sri Lankan-focused system

Trust & Verification

BuildMe.lk includes:

- Verified profiles
- Ratings
- Reviews
- Portfolios

Users can check:

- Past work
- Famous projects
- Customer feedback

This builds trust.

Final Comparison

BuildMe.lk Professional Profile System

Complete Profile & Rating System Plan

This is one of the most important systems in BuildMe.lk because users must trust the people they hire. Before choosing a contractor, lawyer, engineer, hardware owner, or worker, customers want to see:

- Who they are
- What work they did before
- Their ratings
- Reviews from previous customers
- Prices
- Experience level

So BuildMe.lk must create a professional profile ecosystem where every service provider has a detailed profile page.

Common Professional Profile Structure for BuildMe.lk

This is the common profile structure that can be used for:

- Contractors
- Engineers
- Lawyers
- Architects
- QS
- Hardware Owners
- Workers
- Electricians
- Plumbers
- Welders
- Painters

This common structure helps the frontend and backend team create one professional profile system for everyone

Common Profile Details

Basic Information

Every profile should include:

- Full Name
- Profile Photo
- Cover Photo
- Profession / Category
- Company Name (Optional)
- Location
- Phone Number
- Email
- Languages
- Years of Experience

Professional Information

Service Category

Example:

- Contractor
- Architect
- Electrician
- Lawyer
- Hardware Owner
- QS

Common Profile Details

Basic Information

Every profile should include:

- Full Name
- Profile Photo
- Cover Photo
- Profession / Category
- Company Name (Optional)
- Location
- Phone Number
- Email
- Languages
- Years of Experience

Professional Information

Service Category

Example:

- Contractor
- Architect
- Electrician
- Lawyer
- Hardware Owner
- QS

Skills & Specialization

Example:

- Luxury Homes
- Plumbing
- Electrical Systems
- Legal Approvals
- Steel Welding

Description / About Section

A small paragraph about:

- Experience
- Skills
- Services

Example:

“I have 10 years of experience in home construction and electrical systems in Sri Lanka.”

★ Rating & Review System

5. Ratings

Users can rate:

- Quality
- Communication
- Speed
- Trust
- Pricing

Example:

★★★★★ 4.8/5

6. Customer Reviews

Previous customers can write reviews.

Example:

“Very professional and completed work on time.”

Past Work Section

7. Portfolio / Gallery

Users can upload:

- Photos
- Videos
- Completed projects

Example:

- House projects
- Plumbing works
- Electrical systems
- Painting works

Pricing Information

8. Charges & Pricing

Example:

- Daily charges
- Per project pricing
- Per square foot pricing

Availability System

9. Availability Status

Example:

- Available
- Busy
- Fully booked

Service Areas

10. Working Locations

Example:

- Colombo
- Kandy
- Galle
- Island-wide

Verification System

11. Verification Badge

Platform verifies:

- NIC
- Certificates
- Licenses
- Business registration

Example:

 Verified Professional

Communication System

12. Contact Features

Users can:

- Message
- Call
- Request quotation
- Invite to project

Performance Statistics

13. Profile Statistics

Example:

- Projects completed
- Total customers
- Response rate
- Success rate

Smart Matching System

14. AI Recommendation

System recommends professionals based on:

- Ratings
- Area
- Price
- Skills
- Availability

Research About Similar Websites & Applications for BuildMe.lk

Before building BuildMe.lk, it is very important to research existing platforms and understand:

- What systems already exist
- What features they provide
- Their strengths
- Their weaknesses
- How BuildMe.lk can become different and better

This research helps your team:

- ✓ Get ideas
- ✓ Avoid mistakes
- ✓ Find market gaps
- ✓ Create unique features

International Similar Platforms

Houzz

What It Is

Houzz is a global home design and renovation platform.

Users can:

- Find architects
- Find contractors
- View house designs
- Get ideas for interiors

Main Features

- Professional profiles
- Ratings & reviews
- Past project galleries
- Design inspiration
- Product marketplace

Strengths

- ✓ Beautiful UI
- ✓ Strong portfolio system
- ✓ Large professional network

Weaknesses

- ✗ No Sri Lankan focus
- ✗ No live bidding system
- ✗ No worker marketplace
- ✗ No transport integration

What BuildMe.lk Can Learn

- Portfolio system
- Review system
- Professional profiles

BuildZoom

What It Is

A platform connecting homeowners with contractors.

Main Features

- Contractor search
- Reviews
- Project history
- Licensing information

Strengths

- ✓ Contractor verification
- ✓ Project tracking

Weaknesses

- ✗ Limited construction ecosystem
- ✗ No transport system
- ✗ No hardware marketplace
- ✗ No island-wide bidding system

What BuildMe.lk Can Improve

BuildMe.lk can become much larger by combining:

- Materials
- Workers
- Hardware
- Transport
- AI estimation

BuildMarketLK

What It Is

One of the closest Sri Lankan platforms to your idea.

It includes:

- Construction prices
- Professional directory
- Projects
- Material information

Main Features

- Material price tracking
- Professionals hub
- Supplier listings
- Investor information

Strengths

- ✓ Sri Lankan market focus
- ✓ Construction data
- ✓ Professional network

Weaknesses

- ✗ No strong open bidding system
- ✗ No worker marketplace
- ✗ No live transport integration
- ✗ No AI estimation system
- ✗ No daily labor hiring system

Biggest Difference

BuildMe.lk focuses on:

- Live bidding
- Full ecosystem
- Workers
- AI estimation
- Transport
- Daily labor system

BuildMarketLK

What It Is

One of the closest Sri Lankan platforms to your idea.

It includes:

- Construction prices
- Professional directory
- Projects
- Material information

Main Features

- Material price tracking
- Professionals hub
- Supplier listings
- Investor information

Strengths

- ✓ Sri Lankan market focus
- ✓ Construction data
- ✓ Professional network

Weaknesses

- ✗ No strong open bidding system
- ✗ No worker marketplace
- ✗ No live transport integration
- ✗ No AI estimation system
- ✗ No daily labor hiring system

Biggest Difference

BuildMe.lk focuses on:

- Live bidding
- Full ecosystem
- Workers
- AI estimation
- Transport
- Daily labor system

Blu.lk

What It Is

A Sri Lankan service marketplace.

Main Features

- Find workers
- Book services
- Worker ratings
- Job posting

Services

- Plumbers
- Painters
- Electricians
- Carpenters

Strengths

- ✓ Worker-focused system
- ✓ Mobile-friendly
- ✓ Easy job posting

Weaknesses

- ✗ Not focused on full house construction
- ✗ No AI estimation
- ✗ No material marketplace
- ✗ No bidding system

What BuildMe.lk Can Learn

- Simple worker system
- Easy UI for workers

IdealHome.lk

What It Is

Home products and professional marketplace

.

Features

- Home products
- Contractors
- Architects
- Inspiration gallery

Weaknesses

- ✗ No bidding system
- ✗ No worker marketplace
- ✗ No estimation engine

What BuildMe.lk Can Learn

- Product showcase
- Inspiration section

Research Summary Table

Platform	Estimation	Bidding	Workers	Materials	Transport	AI	Sri Lanka Focus
Houzz	✗	✗	✗	Partial	✗	✗	✗
BuildZoom	Partial	✗	✗	✗	✗	✗	✗
Blu.lk	✗	✗	✓	✗	✗	✗	✓
BuildMarketLK	Partial	✗	✗	✓	✗	✗	✓
Surplus.lk	✗	✗	✗	✓	✗	✗	✓
BuildMe.lk	✓	✓	✓	✓	✓	✓	✓

Final Research Conclusion

After researching similar platforms, it is clear that:

- Many platforms provide only one service
- Some focus only on workers
- Some focus only on materials
- Some focus only on professionals

But there is no platform in Sri Lanka that combines:

- ✓ AI estimation
- ✓ Open bidding
- ✓ Worker marketplace
- ✓ Hardware marketplace
- ✓ Transport system
- ✓ Legal services
- ✓ Full construction ecosystem

into one complete platform.

That is the biggest opportunity for BuildMe.lk.

1. Open Bidding System

This is your strongest innovation.

2. Sri Lankan Construction Focus

Localized pricing and labor systems.

3. Full Ecosystem

Everything in one platform.

4. AI + Real Services Combination

Not only AI — real workers and companies.

5. Daily Worker Marketplace

Very useful for Sri Lankan construction industry.

What is Included in Estimation?

1. Building Details

- Land size
- House size
- Number of floors
- Rooms
- Bathrooms
- Kitchen
- Garage
- Balcony

2. Material Estimation

Cement

- Cement quantity
- Cement brands
- SLS certified cement

Sand

- River sand
- Manufactured sand

Metal

- 1/2 metal
- 3/4 metal

Bricks / Blocks

- Brick quantity
- Block quantity

What is Steel Rods

- 10mm rods
- 12mm rods
- 16mm rods
- 20mm rods

3. Electrical Estimation

Wires

- 1.5mm
- 2.5mm
- 4mm
- 6mm

Electrical Items

- Switches
- Lights
- DB boards
- CCTV
- Fans

4. Plumbing Estimation

- Pipes
- Water systems
- Bathroom fittings
- Drainage systems

5. Roofing Estimation

- Roofing sheets
- Roof tiles
- Timber
- Steel structures

6. Interior Estimation

- Furniture
- Paint
- Curtains
- Cupboards
- Decorations
- TV
- Air conditioner

7. Labor Estimation

- Mason charges
- Electrician charges
- Painter charges
- Plumber charges
- Welder charges

8. Transport Estimation

- Material delivery charges
- Vehicle charges
- Mountain area extra costs

9. Legal & Approval Estimation

- Lawyer fees
- Plan approval charges
- Municipality charges
